

Elm Street: a week at the table

Director's usability sheet | 30 September 2026 | doc 06, section 11.7

2-4 people. One shared week. 10 seconds per tick (about 6m 40s).

Prepared, not run. Test comprehension only; no judgement of balance, deception or replay appeal.

Date _____ Names / houses _____ Observer _____

1. Prepare the shared table

Same household Wi-Fi; one laptop serves every phone. Requires Rust stable and Node 22.18+. From the repository root: `cd frontend && npm install && npm run copy-assets`. Start these in separate terminals:

```
cd frontend && npx vite --host --port 5173 --strictPort
cd engine && cargo run --release --bin serve -- --scenario street --names Ada,Ben,Cal,Dee --tasks 15 --budget 800 --week 40 --seed 7 --send-ticks 3 --price-walk --price-every 8 --oracle person --oracle-cost 10 --interval-ms 10000 --bind 0.0.0.0 --port 8787
```

Use 2-4 names; give each person one house. These are experiment settings: send 3 / budget 800 / oracle 10 / R8 / week 40 / seed 7. Defaults are unchanged.

The server starts ticking immediately. Pause at its listening message:

```
curl -X POST http://127.0.0.1:8787/pause
Starting tick ____ (restart if setup has consumed more than one tick).
```

TV: `http://<laptop-ip>:5173/?source=sse&view=tv`
Phones: `http://<laptop-ip>:5173/?source=sse&house=Ada`

Replace Ada; confirm names and matching ticks. Allow local-network access if asked. **Use SSE.** WASM tabs each run separate games.

2. Observe one week

Read: "You each have a house and fifteen pieces to finish. Your staff draft them; you decide what happens at the Door. Try the available choices and tell us when something is unclear. We are testing the screen, not you." Explain tapping only. Record any help given.

Resume: `curl -X POST http://127.0.0.1:8787/resume`. Do not assign strategies, coach trading or change settings. Record connection failures; reopen the same SSE URL.

Ask at relevant moments, without giving answers: What does each card choice do? Where is the Porter; when can you act again? What does the oracle tell you; can it become stale? What happens if you put in 50, or end your house's week? What does the final Note say happened? Mark unused features "not observed".

3. Record each person's words

Person / house	Confused by; help given	Wanted to do but could not	Did price matter? How?
1 _____			
2 _____			
3 _____			
4 _____			

After Friday, save the Notes. Separate bugs from misunderstandings. Comments about fun are anecdotes; this session supports usability findings only. Formal economics-and-deception testing is a separate decision after matrix review.
